APPLIED NUMERICAL MATHEMATICS

Author Index—Volume 26 (1998)

(The issue number is given in front of page numbers)

Abbasian, R.O. and G.F. Carey, Hybrid MPE-iterative schemes for linear and nonlinear systems (3) 277–291

Abia, L.M., J.C. López-Marcos and J. Martínez, On the blow-up time convergence of semidiscretizations of reaction–diffusion equations (4) 399–414

Ainsworth, M. and B. Senior, An adaptive refinement strategy for *hp*-finite element computations (1–2) 165–178

Angermann, L., P. Knabner and K. Thiele, An error estimator for a finite volume discretization of density driven flow in porous media (1–2) 179–191

Apel, T. and G. Lube, Anisotropic mesh refinement for a singularly perturbed reaction diffusion model problem (4) 415–433

Baines, M.J., Grid adaptation via node movement (1–2) 77– 96

Bank, R.E., A simple analysis of some a posteriori error estimates (1–2) 153–164

Behrens, J., Atmospheric and ocean modeling with an adaptive finite element solver for the shallow-water equations (1–2) 217–226

Berzins, M., P.J. Capon and P.K. Jimack, On spatial adaptivity and interpolation when using the method of lines (1–2) 117–133

Biswas, R. and R.C. Strawn, Tetrahedral and hexahedral mesh adaptation for CFD problems (1–2) 135–151

Borsboom, M., Development of an error-minimizing adaptive grid method (1–2) 13– 21

Budd, C.J. and G.J. Collins, An invariant moving mesh scheme for the nonlinear diffusion equation (1–2) 23– 39

Budd, C.J. and A.R. Humphries, Adaptive methods for semi-linear elliptic equations with critical exponents and interior singularities (1–2) 227–240

Capon, P.J., see **Berzins, M.** (1–2) 117–133

Carey, G.F., see **Abbasian, R.O.** (3) 277–291

Carstensen, C. and P. Plecháč, Adaptive algorithms for scalar non-convex variational problems (1–2) 203–216

Chacón Rebollo, T., D. Franco Coronil, F. Ortegón Gallego and I. Sánchez Muñoz, Modelling of compressible flows with highly oscillating initial data by homogenization (4) 435–464

Collins, G.J., see **Budd, C.J.** (1–2) 23– 39

DeLong, M.A. and J.M. Ortega, SOR as a preconditioner II (4) 465–481

Didenko, V.D. and B. Silbermann, An approximate method on non-equidistant partitions for double layer potential equation (1–2) 41– 48

Drury, L.O'C., see **Farrell, K.** (1–2) 3– 12

Duncan, D.B., Introduction to Grid Adaptation Proceedings (1–2) 1– 2

Farrell, K. and L.O'C. Drury, An explicit, adaptive grid algorithm for one-dimensional initial value problems (1–2) 3– 12

Elsevier Science B.V.

Flaherty, J.E., R.M. Loy, C. Özturan, M.S. Shephard, B.K. Szymanski, J.D. Teresco and L.H. Ziantz, Parallel structures and dynamic load balancing for adaptive finite element computation (1–2) 241–263
Franco Coronil, F., see **Chacón Rebollo, T.** (4) 435–464

Huang, J., An efficient algorithm to solve a sequence of linear equations arising in nonlinear H^∞ control (3) 293–306
Huang, W. and R.D. Russell, A high dimensional moving mesh strategy (1–2) 63– 76
Humphries, A.R., see **Budd, C.J.** (1–2) 227–240

Jimack, P.K., see **Berzins, M.** (1–2) 117–133
